Personality Mapping of Doctor with Big 5 personality Dimensions

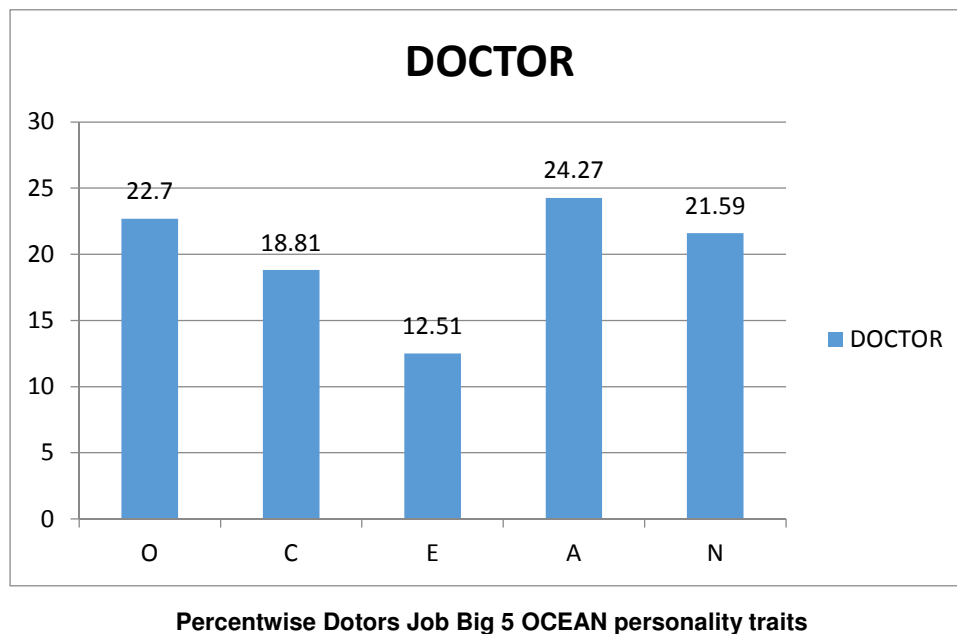

METHOD

For this study, respondents doctors were taken from Khandesh region Maharashtra which includes Dhule, Jalgaon and Nandurbar Districts from these 3 districts total 110(Jalgaon-41,Dhule-24,nandurbar-45) valid responses. In order to have a better response rate, administered on-site method by was used for data collection. This method is very efficient in generating large amount of data especially when the survey is conducted during meeting with the respondents .Respondents were required to rate their degree of agreement by assigning point on a Likert scale ranging from 1 (*Strongly agree*) to 5 (*Strongly disagree*). They were also reminded that there is no right or wrong Answer to the questions and confidentiality of their answers is guaranteed

DATA ANALYSIS AND INTERPREATTION

After collecting data from the respondents and as per the reating given in the likert scale appropriate calculation ius made in Excel which is easy to use and also increases the accuracy of result . after analyzing the data following result is shown for doctors personality.

RESULT

Above graph 6.5 shows that the respondents from Doctor job have 22.7 percent of Openness,18.81 percent of contiousness,12.51 percent of Extraversion,24.27 percent of Agreeableness and 21.59 percent of Neroticism.Doctors have highest score in Agreeablness with 24.27 and after that 22.7 in Openness and 21.59 in Neuroticism and Lowest score in Extraversion with 12.51.It means that the person with highest in Agreeableness and lowest in Extraversion matched with doctors job requirement.

CONCLUSION

Present study concluded that doctors personality are positively correlated with conscientiousness, extroversion, openness and agreeableness Extraversion is negatively correlated with Doctors personality.
